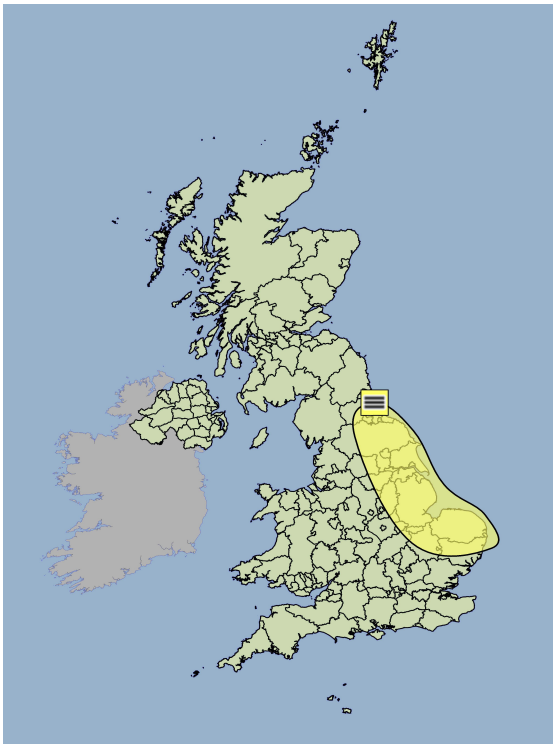
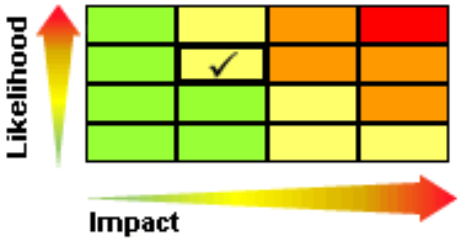
National Severe Weather Warning Service





Chief Forecasters Assessment
A combination of clearing skies, light winds and very moist ground mean that fog will readily form this evening over many parts of eastern England, and will locally become dense in places. Visibilities below 100 meters are likely in the denser areas of fog. The limited insolation available at this time of year, along with light winds, means that the fog will be rather reluctant to clear on Saturday morning, but current expectations are that most of the fog will have cleared by the end of the morning, although mist and low cloud is likely to plague some locations into the afternoon.

The Met Office have issued a **Yellow Warning** of **Fog**

Valid from **18:00 on Fri, 14th Nov 2014** until **12:00 on Sat, 15th Nov 2014**

Fog is expected to develop quite widely across many parts of eastern England through the course of this evening, and will become rather dense in places. During Saturday, the fog will linger well into the morning, but most areas are expected to be clear of fog by the end of the morning.

The public should be aware of the risk of some disruption to travel.
